

The Wisconsin Geological Society has been active in the fall of 2024.

We had some members travel up to Wausau to dig for Moonstone dig on September 8th.

Pierre gave a talk in New Holstein on Wisconsin's Geologic History on the 14th.

Pierre presented a display of Precambrian rocks at the Rock River Valley Geological society show on October 5th and 6th.

Pierre took a group of 30+ Girl Scouts from Fox Point to Doctors Park on the 11th to collect rocks. He helped them identify them and they all had a great time.

On October 12th, several members traveled to Earthaven Museum where Mike Riesch gave us a guided tour of all of the museum's treasures. We then headed to the Lena quarry to look for crystals of dolomite and pyrite, as well as fossils of trilobites and cephalopods.
